

Alex Klevay 10/5/2017

BIO

Alex was born in Washington D. C., raised in Ohio, and educated in the Bay Area.

After earning a B.S. in Chemical Biology from UC Berkeley, he became a research engineer focused on functionalizing silicone polymers for the Samsung Group.

He is currently a process chemist researching electrolytes and developing active materials at Natron, a Santa Clara sodium battery startup on a mission to innovate energy storage.

PERSONAL STATEMENT

Determined to remain open to inspiration from disparate subjects outside of my own bubble, I can't help but utilize ACS events and resources which so elegantly showcase new possibilities that lead to the cutting edge of chemistry.

The ACS has always been there for me, whether at the beginning or end of a project, and I've found reward in volunteering at events like the Bay Area Science Festival and writing articles for the local newsletter.

That's why I'm confident I'll receive even more satisfaction by increasing my level of involvement and becoming an alternate councilor.

I feel it's my personal responsibility to contribute to the Society which has been instrumental in my own professional development, and also so critical in championing Chemistry at large.
